# NanoSet™ Cleaner

POLISHING & MAINTENANCE

NewLook's NanoSet™ Cleaner concentrate is a revolutionary cleaning product that combines cleansing action with suspended nano-silica. It is a water-based, non-corrosive concrete cleaner, ideal for the removal of surface dirt and soil from architectural concrete floor surfaces, particularly polished concrete.

NanoSet Cleaner fortifies and helps protect polished concrete surfaces by introducing nano-sized silica into the substrate as it cleans. Designed to be used with industrial "auto scrubbing" machines as part of regular building maintenance for maximum value. Use as part of the NanoSet Polishing System.

#### Features & Benefits:

- Safe, non-corrosive concentrate
- No rinsing required
- Increased durability of polished floors
- Fortifies concrete substrate over time with regular maintenance with NanoSet Cleaner
- Conveniently used with industrial floor scrubbing/cleaning machines
- Water based, environmentally friendly product
- Multi-purpose surface cleaner

#### Sizes & Coverage:

- Available in 32 oz., 1 gallon, 5 gallon and 55 gallon containers
- Coverage is approximately 1,500 to 2,000 square feet per gallon
- Dilute 4 oz. concentrated NanoSet™ Cleaner concentrate with 1 gallon of water

#### Applications (Use Over Polished Floor):

- Grocery stores
- Convention centers
- Big box retail centers
- Warehouse floors

#### Working Tips & Keys to Success:

- Gum and other larger, bond-breaking residues should be scraped off the surface before cleaning
- For heavy dirt and grease increase ratio to as much as 10 ounces of NanoSet Cleaner to one (1) gallon of water with brushes and a squeegee using a "figure 8" motion to reduce streaking and prevent puddling
- NanoSet Cleaner is designed for use with "auto scrubber" machine cleaning
- Mop applications require a separate rinse water bucket to clean the mop
- No rinsing is required for either cleaning method

# NanoSet™ Technology

POLISHING & MAINTENANCE

## NanoSet™ Technology

The NanoSet Polishing System utilizes a proprietary and green manufacturing process to leverage advanced, inert nano-technology to deliver sustainable and durable results. The concentrated dispersion of amorphous, nano-sized silica particles offer extensive chemical reaction-sites that penetrate deeply and start reacting quickly upon contact, forming calcium silica hydrate (CSH), which strengthens the concrete matrix and increases stain resistance.
